Keep your accounts safe the simple way

A password manager helps you create strong and unique passwords for all of your work and personal accounts, remembers them for you, and enters them into websites as you log in.

Through Stanford, you have free access to a password manager from Dashlane. See reverse for details.

Why is password security important?

- Hackers obtain passwords through phishing and data breaches
- They try logging into all of your accounts using those passwords
- If you have weak or reused passwords, you put your accounts, data, and money at risk.
- The best defense? Use a password manager to generate and store strong, unique passwords.
